

## The HBC Academy Vision for Nigeria

To use our experience and passion to empower Nigerian people, local governments, community groups and national organisations to train their people in practical IT skills and prepare them for global industry certifications.

- To enable the academies in Nigeria to prepare a workforce with practical skills to network all the schools, businesses and homes in Nigeria.
- To train and establish Local Academies and enable them to offer affordable, accredited, hands-on, globally recognised courses as opposed to the current trend of commercial IT Training companies offering a substandard, non-accredited, theoretical training at a price which the average Nigerian cannot afford. This programme makes CCNA and other relevant courses available to the man in the street.
- To empower academies to train students in skills that are very relevant in networking globally and to the fast-growing telecoms industry in Nigeria. CCNA, in particular, is viewed by the Telecoms industry as extremely valuable.
- As a Cisco Regional Academy of best practise, we are offering experience, training and support to the academies that we are able to empower and to help them become self sustainable and managed by local people.

- To embed soft skills into our technical training, covering effective communication and teaching skills and imparting an attitude of success and achievement.
- To change the lives of Nigerians and their families for the better by giving them access to quality education using the very latest technology and teaching methods
- To enable the academies in the Nigeria to prepare a workforce with skills that are valuable and necessary in the fast growing oil, gas and telecoms industry.
- To change the lives of families in Nigeria, empowering individuals with skills to empower others, giving them a brighter and more prosperous future.
